

Contributors may use this template as an example of a full-length article. Papers with different theoretical approaches are accepted as long as they conform to the Submission Guidelines. *JACET Journal* welcomes papers on qualitative/ quantitative studies, book reviews, and research notes.

論文のテンプレートを作成してみましたのでご参考にして下さい。ただし研究方法や章立ては、研究の内容と質によって異なるため、『投稿規程』にのっとっている限りこのテンプレートと全く同じである必要はありません。JACET では様々なアプローチの質的・量的研究、書評、及び、研究ノートを受け付けています。

The Title Should Summarize the Main Idea of the Paper Clearly and Simply

(Space)

(Space)

ABSTRACT

The abstract should describe the purpose and content of the paper. Beginning with the most important information, the abstract should include only the four or five key concepts, findings, or implications. All abbreviations and acronyms need to be defined. Every sentence should be clear and informative. An abstract should be brief and not exceed 200 words.

(Space)

Key words: learning strategies, self-access, cross-cultural communication, independence, autonomy (no more than 5 words)

I. INTRODUCTION

The introduction presents the problem being investigated and describes the research approach. The *APA Publication Manual* (2001) states that when writing the introduction, the background to the study has to be described. While relevant literature should be presented, this does not need to be an exhaustive historical review. The intention is to show a logical continuity between earlier and current work. If controversial issues are included, this should be done fairly.

The introduction should describe the purpose and rationale of the study. Once the research topic and related literature have been presented, this is then followed by an explanation of the research approach used to solve the problem.

(Space)

II. METHOD

(Space)

The purpose of the Method section is to describe how the study was done. Furthermore, the description should enable readers to determine the reliability and validity of the results obtained, as well as to replicate the study if necessary. This section is generally divided into labeled subsections, which describe the participants or subjects, the materials, and the procedure.

1. Participants

The APA *Publication Manual* (2001) emphasizes that a description of the research subjects is needed so that the results can be evaluated and comparisons be made. Furthermore, the sample should be representative.

2. Procedure

The subsection on procedure should summarize each stage of the research project.

(Space)

III. RESULTS

The data collected and the statistical or data analytic treatments used should be summarized in the Results section. A description of the data should provide enough detail to warrant the conclusions.

(Space)

1. Tables and figures.

When describing the data, it is important to use the most appropriate medium to display the information clearly and economically. Summarizing the results and the analysis in tables or figures is generally preferable.

(Space)

Table 1. Correlations between the language and xxxxxxxx

Case	Sub-item 1	Sub-item 2	Sub-item 3	Sub-item 4
1	1	3	4	2
2	1	3	4	2
3	2	3	4	1
4	2	3	4	1
Mean rank	1.9	3.1	3.5	2

(Space)

When using tables or figures, it is necessary to refer to all of them in the text. Figures should be numbered consecutively as they appear in the text. Tables and graphs should be centered.

(Space)

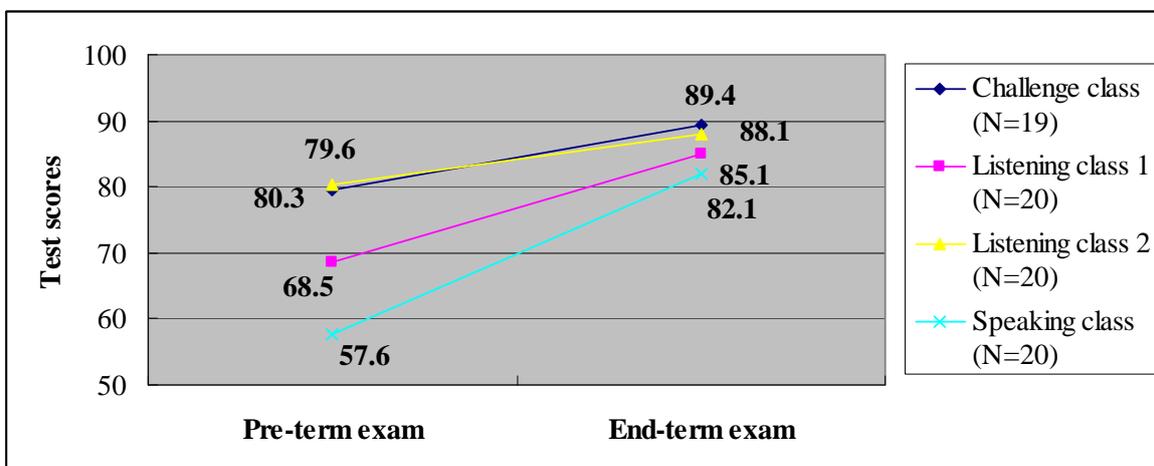

Figure 1. Comparison of English proficiency

Note: Writers may include tables and/or graphs from other sources. When creating/recreating a table or graph based on another writer's data, citation is required. When scanning or otherwise including another writer's original table or graph, however, permission must be granted by the original publisher or author possessing the copyright.

IV. DISCUSSION

Once the results have been presented, these are then discussed in detail, particularly with reference to the original research hypotheses. The Discussion section should begin with a clear statement of support or nonsupport for the original hypotheses. It should also highlight the importance of the findings.

(Space)

V. CONCLUSION

You are encouraged to conclude your paper with commentary on the importance of your findings. This section also describes the limitations of the study and provides suggestions for further research.

APPENDIX

The APA manual (2001) suggests that it is preferable to place in an appendix material which

would seem misplaced or distracting in the main text.

日本語で原稿を提出する場合の参考文献記載方法

- (1)日本語と英語の文献は別にしてまとめて下さい。
- (2)日本語の文献を先に、英語の文献を後にそれぞれアルファベット順で示して下さい。
